Education

Master's in Computer Application (MCA)	Nov 2022–Nov 2024
--	-------------------

Manipal University

- Major: Management
- Skills and Technology: Python, C, Java, TypeScript, SQL, SQLite, Excel

Skills & Abilities

Management

- Cultivated thriving Telegram channels, attracting a loyal community of over twenty thousand followers through targeted content strategies despite the niche appeal of cryptocurrency discussions.
- Managed thoroughly and gained from zero to twenty thousand followers making HQ content on the channels mentioned above.
- Elevated the revenue in less than a year by two hundred percent.

Projects

- Revamped two fully functional websites from the ground up, [wasiq.in](#) and [wasiq.in](#), showcasing a portfolio of projects resulting in increased user engagement by thirty-five percent.
- Launched an interactive platform at [wasiq.in](#) featuring five unique blockchain-based applications, facilitating user engagement through detailed project descriptions that highlight individual contributions to each initiative.
- **Online CA Web Portal (2021)**: Web portal to manage a university database of students and faculty, assign tests, track homework, and monitor dues.
- **FeedGram**: Anonymous feedback tracking bot to help Telegram channel owners maintain privacy while communicating with their audience.
- **Telegram Banner Bot**: Bot that helps create transparent banners on Telegram messages and embed links in messages.
- **ForeverMail (2023)**: Provides anonymous email addresses to users to prevent leaks of personal email addresses.

Communication

- Orchestrated targeted content strategies that attracted a diverse audience of over twenty thousand followers in less than a year, leveraging community feedback to refine approaches and boost engagement metrics.
- Enhanced messaging clarity by conducting workshops that improved communication strategies; resulted in participants reporting a forty percent better understanding of key messages related to website functionalities and user interactions.

Leadership

- Directed comprehensive multi-channel marketing efforts for entire portfolio; streamlined content delivery processes resulting in a thirty percent increase in audience engagement across platforms without compromising quality or timelines during peak periods.
- Developed and deployed an Online CA Web Portal project that streamlined user access to essential resources, earning over one thousand unique visits in the first month; available for review on GitHub.
- Facilitated user feedback sessions focusing on optimizing content presentation which ultimately highlighted top-performing case studies, providing foundational data necessary for addressing critical areas impacting overall website effectiveness positively.

Technical

- Developed a CRUD application for assigning tests to students, enabling teachers to organize tests, track student performance, and perform assessments.
- Built a Python-based Telegram mini app that provides temporary email addresses for signing up on online services while protecting user privacy.
- Built a Python CRUD application for points management where users can earn and redeem points for cash or services.
- Working on an AI Twitter bot for an EVM token launchpad to provide updates and assistance on launchpad trends.
- Decent knowledge of FTP, TCP/UDP, and IP protocols for network-related tasks.

Experience

Digital Assets Analyst — FreeLance

2023–2025

Telega FZ-LLC

- Analyzed cryptocurrency market trends to identify strategic investment opportunities, resulting in a twenty-five percent increase in portfolio returns within the first three months of tenure on my Telegram Channel.
- Conducted comprehensive technical and fundamental analyses on emerging blockchain technologies, leading to the successful recommendation of three innovative projects that addressed real-world challenges in the crypto space.
- Leveraged predictive analytics tools to evaluate over one hundred cryptocurrencies monthly, applying insights that resulted in improved risk management practices and increased investment opportunities within the evolving blockchain landscape.
- Collaborated with cross-functional teams on blockchain initiatives that promoted innovation and sustainability in the cryptocurrency sector, contributing to two successful project launches within the first quarter.

Full Stack Developer - FreeLance

2025-2026

SniperSearch

- Developed a Discord application using SQL database to notify when specific EVM launchpad tokens are about to unlock.
- Coordinated with web app developers and testers to communicate issues and execute features in time.
- Contributed to XRay AI-based Twitter app to help investors and users analyze existing and upcoming launchpad projects.
- Fixed duplicate reply behavior by replacing JSON memory with SQLite tracking for replied tweets.
- Tested the app before production release to reduce issues.
- Implemented tweet thread functionality to handle Twitter character and rate-limit constraints.
- Applied timing and truncation controls due to Twitter rate limits and context fitting.
- Fetched data from Dune to get better understanding on whether token is worth investing
